

RouteNGNSM

A Powerful, Flexible, SIP Routing Solution

Route calls based on your requirements, not your limitations.

▶ **RouteNGN** is a powerful, cost-effective and easy-to-use, high-capacity routing solution that provides maximum opportunities for flexibility.

POWERFUL FEATURES

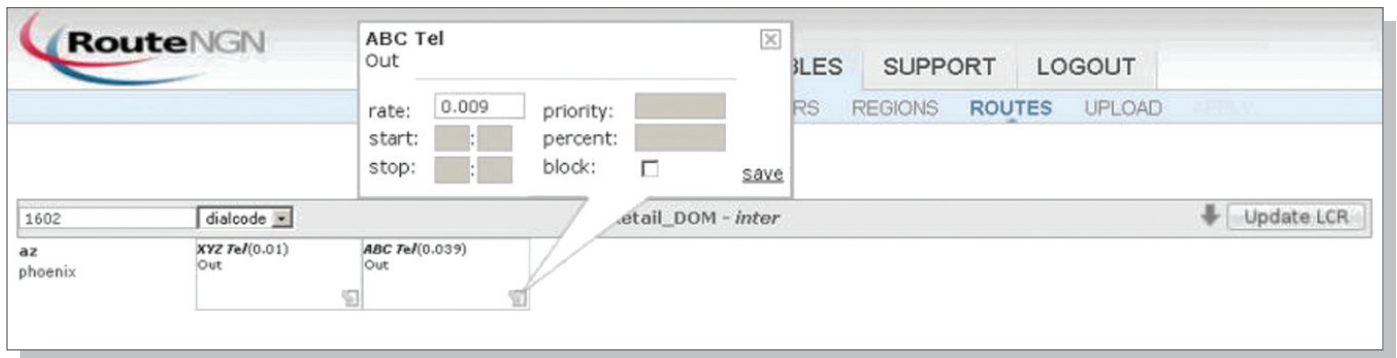

- ▶ True carrier grade capacity – process over 250 requests per second
- ▶ Use visual LCR tables with drag & drop interface and LCR priority override
- ▶ Minimize the risk of network failures via geographically redundant server clusters with mirrored databases
- ▶ Scale services horizontally through our transparent cluster architecture

BOTTOM LINE PERFORMANCE

- ▶ **Route your calls based on your requirements, not your limitations**
- ▶ Apply profit thresholds to any routing module and make money on every call
- ▶ Seamlessly manage millions of routes for multiple suppliers on an inter- and intra-state basis
- ▶ Create and change routing on the fly, without taking your system offline
- ▶ Get more control by splitting out inbound traffic for each customer and set different margins for each destination, or grouping of destinations
- ▶ Set a minimum acceptable profit margin and never lose money on a route again

AUTHENTIC FLEXIBILITY

- ▶ Compatible with ANY RFC-compliant SIP agent: switch, gateway, SBC, etc...
- ▶ Leverage your existing assets – people and equipment
- ▶ All your network devices talk to a single, centralized LCR
- ▶ An API for integration with other systems including billing, LERG, APIs
- ▶ Transparent components work with any OS, across multiple locations
- ▶ Add jurisdictional routing support with our Domestic Jurisdictional Routing Module
- ▶ Route US domestic traffic by State (inter-intra), LATA, or OCN

Easy GUI interface makes complex routing simple
